TRAVEL OPPORTUNITY: Don't miss our Fantastic Landscapes
Tours. Travel with a geologist! We know the best places.
NEED A SPEAKER: Check out my topics for school and adult groups.

- **New ~ ~ the EXTENSIVELY REVISED 3rd edition of *Dinosaurs, Dunes, and Drifting Continents: the Geology of the Connecticut River Valley***, by Richard D. Little, 2003, 180 pages, 8.5 X 11 inches, color cover (Will Sillin's "In the Late Triassic"), abundantly illustrated with maps, diagrams, and photos; plus a bit of humor, too. From plate tectonics, dinosaur discoveries, and rare armored mud balls, to Lake Hitchcock's deltas and dunes, plus geologic resources and hazards; this book has it all. And it includes a "Where To See It" appendix to guide you to field sites from the Valley's head to mouth; plus a glossary and index. ADOPTED in a number of classrooms! ISBN: 9616520-7-1

Reviewers comment "marvelous" – L. Margulis, UMass; "excellent" J. Skehan, BC.

- **Exploring the Berkshire Hills: A Guide to Geology and Early Industry in the Upper Housatonic Watershed** by Ed Kirby of Sharon, CT., 1995, 160 p., 8.5 x 11 inches, full-color cover, spiral wire binding, well illustrated with historic and recent photographs & diagrams. ISBN 0-9616520-4-7

After introductory chapters on Berkshire geology, Author Ed Kirby takes you to some of the most scenic and interesting sites throughout the Berkshires of Massachusetts, Connecticut, and New York. As you take the 25 field tours (drives, hikes and walks), you gain field experience with local geology and also appreciate the role geology played in the industrial and historical development of the region. With some humor and excellent illustrations, Ed presents the making of rocks and landscape, the workings of blast furnaces, localities of iron ore, glass sand, and clay. Quotes and stories from Longfellow, Melville, Hawthorne, and Wharton are interspersed with descriptions of unconformities, great faults, waterfalls, and mountaintop vistas. This book is a strong seller since not only is it an interesting and useful guide to the region for both tourists and natives, it combines clear writing and excellent photographs and illustrations for a unique, multidisciplinary look at the region.

- DVD #1: **THE FLOW OF TIME**
500 Million Years of Geohistory in the Connecticut River Valley,
Richard D. Little, 1994 – digitally reedited & revised 2000, 45 minutes ISBN 0-9616520-3-9
(Includes a 4 min. program "Introduction to the Rock Cycle" at the beginning of the video)

With animations and a bit of humor, geologist-educator Richard Little takes you through the amazing events of the last 500 million years in the Connecticut River Valley region, and shows you why this is the best place to study geology in the world. Learn about glacial Lake Hitchcock, **unique** armored mud balls and take a tour of the dinosaur resources of the Amherst College Pratt Museum and Dinosaur State Park, Rocky Hill, CT. This video has been seen by thousands and is in use in classrooms from upper elementary school through college. "A ten-million-years-a-minute thriller!"-- Sy Montgomery, Boston Globe Columnist

- DVD # 2: **THE RISE AND FALL OF LAKE HITCHCOCK -- New England's Greatest Glacial Lake**
Richard D. Little, 2000, 45 min., digitally edited ISBN 0-9616520-5-5
Prof. Richard Little hosts this 45-minute program, filled with air views, diagrams, animations, spectacular glacial locations from Canada to Alaska, some humor, and interviews with geologists, investigating such things as groundwater, varved clay, concretions, sand dunes, pingos, and the building and destruction of the Lake Hitchcock dam in central Connecticut. You will join a Tufts University glacial geology class to see how varved clay is collected and analyzed and learn why Lake Hitchcock was the most important event to shape the natural and human history of the Connecticut Valley.
